

## Educating for a Global Economy

Technology is speeding up the process of taking product from concept to market and making the world smaller each day. At FIDM we have the programs to prepare our students to enter the global economy.

FIDM Graduates understand how the global economy works, whether they work abroad or locally. What happens in Paris, Milan, London, and Hong Kong affects our curriculum. FIDM Students learn the importance of the emerging markets of India, Russia, and China and how they are impacting modern industries. Our International Advisory Board and industry faculty are constantly shaping the curriculum to reflect the ever-changing global economy. FIDM educates its students for the world.

***FIDM puts global issues at the forefront of education.***
